## Research Associate-Cloning

[Creve Coeur, MO](#) • Molecular Technologies

### Description

Benson Hill Biosystems empowers innovators to unlock the global genetic potential of plants benefiting people and our planet. We are building the future of agricultural genomics and looking for talented and passionate individuals who will help us drive our vision. Our core values will inspire you to be bold, innovate through collaboration, work hard and smart, and have fun while doing so!

We are actively seeking a **Research Associate** to join our rapidly growing organization. This position could be the right fit for you if you display strengths in:

- Troubleshooting and problem solving
- Working in a fast-paced and collaborative environment
- PCR and primer design
- Cloning using restriction enzymes or PCR-based assembly
- Maintaining detailed and organized records
- Multitasking and taking initiative on new projects

### You'll make an impact by:

- Performing DNA extraction from various plant tissues
- Executing on genome editing experiments using innovative new technologies
- Through generating and presenting high quality data in multiple crops

### Requirements

#### You have:

- BS or MS in molecular biology, plant biology or related discipline
- 3-5 years hands-on experience in a molecular biology setting
- Strong technical knowledge of plant molecular biology
- Previous experience with DNA or RNA extraction and handling
- Previous experience with PCR-based assays
- Experience in an industrial agriculture biotechnology setting

#### We have:

- A flexible PTO program with a focus on work/life balance
- Competitive medical benefits and retirement savings plan
- **FREE** Dental and Vision Coverage
- Education reimbursement
- **PAID** parental leave
- And more...
